ANES 2016 Time Series Data User's Brief Guide

Initial Release

April 3, 2017

This is a brief guide to the American National Election Studies (ANES) 2016 Time Series study, to accompany the initial release of the data in April 2017.

The ANES 2016 Time Series is a continuation of the series of election studies conducted by the ANES since 1948 to support analysis of public opinion and voting behavior in U.S. presidential elections. This year's study features a dual-mode design with both traditional face-to-face interviewing (n=1,181) and surveys conducted on the Internet (n=3,090), and a total sample size of 4,271.

Initial Release

This data release in April 2017 is the initial public release of the data. The file serves analysts who want to start working with the data as soon as possible. Data from an initial release differ from final ANES data releases in several important ways. Quality control review, summary variables, and documentation are abbreviated. Future releases of the data will provide expanded documentation and additional data, including interviewer characteristics, interviewer observations, and many administrative variables such as data on household selection, question timing, dwelling unit observations, and candidate-election information. Numerical coding of most non-confidential open-ended questions will be included in future releases as they are completed. Future releases may also include error corrections and edits to improve accuracy or usability. If you find errors or have comments or questions about the data, please communicate with ANES staff by writing to anes@electionstudies.org

Sample Design and Respondent Recruitment

The study has two independently drawn probability samples that describe approximately the same population. The target population for the face-to-face mode was 222.6 million U.S. citizens age 18 or older living in the 48 contiguous states of the USA or the District of Columbia, and the target population for the Internet mode was 224.1 million U.S. citizens age 18 or older living in the 50 US states or the District of Columbia. In both modes, the sampling frame was lists of residential addresses where mail is delivered, and to be eligible to participate, a respondent had to reside at the sampled address and be a U.S. citizen age 18 or older at the time of recruitment.

Face-to-face face mode. The sample for in-person interviews was a multi-stage stratified cluster sample. This is similar in general design but different in details from past designs of ANES Time Series studies. Sixty primary sampling units (PSUs) were selected from across the 48 contiguous states and Washington DC. The PSUs were counties, or combinations of counties to form a minimum population of 50,000, or, in the case of Los Angeles County, half-counties (i.e. L.A. County was divided into two PSUs due to its large size). Counties were stratified by Census region, prevalence of poverty and members of minority groups, and population size, and then selected at random with probability proportional to the number of adult citizens, except that Cook County, IL, Harris County, TX, Maricopa County, AZ, and both halves of Los Angeles, CA, were selected with certainty.

Within each PSU, four smaller areas were drawn (secondary sampling units, which were Census Block Groups), and households were selected at random from within these areas from the US Postal Service's computerized delivery sequence file (DSF). An advance letter was sent to each selected address that

included a study brochure and \$5 in cash, after which an interviewer visited the address to complete a screening interview to randomly select one person to be interviewed from among the adult U.S. citizens living there. Those interviewed were given \$25 or \$50 during the initial phase of the field period (with \$50 offered in PSUs where predicted response propensity was low and \$25 offered elsewhere), escalating to \$100 after initial non-response.

During the last two weeks of data collection, subsampling was performed in which half of the remaining eligible cases from the face-to-face were dropped from the study to focus field efforts on the other half. The weights account for this subsampling by up-weighting the cases retained at this stage.

Internet mode. The sample for the Internet mode was a random draw from the DSF (excluding “drop point” addresses), with all included residential addresses across the 50 states and Washington DC having equal probability of selection. Selected addresses were sent a series of letters to recruit one household member to go online to complete a survey. The invitation letter included \$20 in cash and promised \$40 for completing a survey online (later escalated to \$80 for initial non-respondents). This online survey included a screening instrument to randomly select one person from among the adult U.S. citizens living at the address to complete the ANES questionnaire online and receive \$40 or \$80.

Mode sample differences. The face-to-face component of the study does not include respondents from Alaska or Hawaii; the Internet component does. This is the main substantive design difference in eligibility and coverage for the two modes and for most analytic purposes it is probably ignorable because the combined population of Alaska and Hawaii is less than 1 percent of the study population.

Data Collection

Field dates. The study interviewed respondents in a pre-election survey between September 7 and November 7, 2016. Election day was November 8. The study re-interviewed as many as possible of the same respondents in a post-election survey between November 9 and January 8, 2017.

Locations. In-person interviews were normally conducted in the respondent’s homes, but were allowed to be conducted at any location that was convenient for the respondent. Internet questionnaires could be completed anywhere the respondent had access to the Internet, on a computer or on a mobile device.

Modes of administration. In-person interviews were conducted by trained interviewers using computer-assisted personal interviewing (CAPI) software on laptop computers. During a portion of the in-person interview, the respondent answered certain sensitive questions on the laptop computer directly, without the interviewer’s participation (known as computer assisted self-interviewing). Respondents were only eligible to complete the survey in the mode for which they were sampled; no one sampled for the Internet study was interviewed by a live interviewer, and no one sampled for the face-to-face interview completed the study online.

Interview length. The pre-election and post-election questionnaires were designed for a median administration time of approximately 80 minutes each, not counting screening procedures.

Languages. Interviews in both modes were conducted in English or Spanish.

Response Rates

The response rate, using the American Association for Public Opinion Research (AAPOR) formula for the minimum response rate (known as AAPOR Response Rate 1) on the pre-election interview, was 50 percent for the face-to-face component and 44 percent for the Internet component. The response rate for the face-to-face component is weighted to account for subsampling during data collection; due to subsampling for the face to face mode, the unweighted response rate would not be meaningful. The re-interview rate on the post-election survey was 90 percent for the face-to-face component and 84 percent for the Internet component.

Pre-election interviews were considered sufficiently complete to be counted as completions for weighting and for calculation of the response rate when the survey was administered through the last item of the demographic section “DEM3.” There were a 4,271 pre-election interviews.

Restricted Data Access

Some variables, including date of birth, the respondent’s ZIP code, and answers to open-ended questions are coded “-3. Restricted access” on the public use dataset. Data for many of these variables will be forthcoming and available through a Restricted Data Access (RDA) agreement. See the ANES website for more information. Redacted texts for non-confidential open-ends will be made available as the redactions are completed. Redacted open-ends will be available for download from the ANES 2016 Time Series study page.

Data Analysis, Weights, and Variance Estimation

The data can be analyzed using the combined dual-mode sample, or using the face-to-face sample alone, or using the Internet sample alone. In the combined sample, the larger number of Internet sample cases makes that mode dominate the estimates by a ratio of about 3:1.

Analysis should be weighted to accurately represent the population. Sampling error calculations should account for the complex sample design and the effects of weighting on variance.

Weights

To analyze the complete dataset (both web and face-to-face modes) using variables from the post-election survey only or from both the pre-election and post-election questionnaires, use the weight V160102. For analysis of the complete dataset using only the pre-election questionnaire data, use the weight V160101.

The table below indicates the weight variable to use for different types of analysis.

<i>Weight</i>	<i>Use for analysis of the...</i>
V160102	full sample using post-election survey only or both pre and post
V160101	full sample using pre-election survey data only
V160102f	face-to-face mode alone, using the post-election survey or both pre and post
V160101f	face-to-face mode alone, using pre-election survey data only
V160102w	Internet mode alone, using data from both pre- and post-election or post alone
V160101w	Internet mode alone, using data from only the pre-election survey

Sampling errors and significance testing

The study is not a simple random sample, so statistical procedures for complex sample designs must be used to obtain correct estimates of sampling errors and correct indications of statistical significance. Statistical software such as Stata, *R* with a survey analysis package, or SPSS with the Complex Samples package can perform a Taylor Series calculation of sampling errors when provided with the appropriate strata and cluster variables. In Stata, the command to set up this type of analysis is as follows:

```
svyset [pweight=WEIGHT], strata(STRATA) psu(CLUSTER)
```

In the code example above, WEIGHT would be replaced with the correct weight for the type of analysis being performed (as indicated in the previous section on weighting). STRATA and CLUSTER would be replaced with the variables for the corresponding analysis as indicated below.

<i>Variable</i>	<i>Definition</i>
V160201	Stratum – Full sample
V160201f	Stratum – Face-to-face sample
V160201w	Stratum – Web sample
V160202	Variance PSU – full sample
V160202f	Variance PSU – Face-to-face sample
V160202w	Variance PSU – Web sample

For example, the code to set up Stata for an analysis of the full sample that includes one or more variables from the post-election survey is as follows:

```
svyset [pweight=V160102], strata(V160201) psu(V160202)
```

For more information about weighted analysis of ANES data, see DeBell, *How to Analyze ANES Survey Data*: <http://www.electionstudies.org/Library/papers/nes012492.pdf>

Acknowledgments

The study was funded by the National Science Foundation by grants to the University of Michigan and Stanford University (grant nos. SES-1444721 and SES-1444910 respectively).

The study was designed, and data collection supervised, by the ANES Principal Investigators and staff with design input from the ANES advisory board and contributors to the ANES Online Commons. At the University of Michigan, Vincent Hutchings and Ted Brader were Principal Investigators. At Stanford University, Shanto Iyengar was Principal Investigator during the study's execution and Simon Jackman and Gary Segura were Principal Investigators during the study's conception and initial development.

Darrell Donakowski was study director for the face-to-face component and Matthew DeBell was Co-Investigator at Stanford University and study director for the Internet component. ANES staff on the project were Patricia Luevano, Jaime Ventura, Laurie Pierson, and Natalya Maisel.

Data collection was performed by Westat, Inc. Westat developed the sampling plan and collaborated with ANES personnel on other aspects of the study's technical design. Lead personnel on the project at

Westat included Michelle Amsbary, Mike Brick, Shelley Brock, Rick Dulaney, Brad Edwards, Vanessa Meldener, Roger Tourangeau, and Siu Wan. The sampling frame was provided by Marketing Systems Group.

 ASSIGNED BALLOT COLOR IS: [YELLOW/GREEN].
 PLEASE DESCRIBE WHETHER YOU HAVE THE CORRECT BALLOT CARD FOR THE RESPONDENT:
 [-- NO BALLOT CARD -- /]

'Yellow' ballot card assignment indicated that names of Democratic candidates were included before names of Republican candidate names for vote section questions that list candidate names and, in face-to-face mode, for the order of names listed on the Ballot Cards. 'Green' was assigned for display of Republican candidate names first. Ballot card use was not intended for face-to-face respondents when the respondent was not registered at the sample address or the county of sample address, or when names of candidates running for the U.S. House, U.S. Senate or Governor were not preloaded for candidates who were registered at the sample address or county of sample address.

V161150a Numeric PRE: VERSION 1A placement- Does R consider voting a duty or choice

Questionnaire: PRESWIN_DUTYCHOICE

IF R SELECTED FOR VERSION 1A OF VERSION 1A / VERSION 1B SPLICE:

Different people feel differently about voting. For some, voting is a duty - they feel they should vote in every election no matter how they feel about the candidates and parties. For others voting is a choice - they feel free to vote or not to vote, depending on how they feel about the candidates and parties. For you personally, is voting mainly a duty, mainly a choice, or neither a duty nor a choice?

Respondents were randomly assigned to be asked alternative versions of this question which either describe duty first and choice second (version 1A) or choice first and duty second (version 1B).

RANDOMIZATION: Selection for word order, duty or choice first in question

IF R HEARD ABOUT PRES CAMPAIGN ON INTERNET SITE(S), CHAT ROOM(S), OR BLOG(S):

Which of the following websites do you visit regularly?
Please check any that you visit at least once a month.

(Mark all that apply)

The top 15 online news websites were selected as they were specifically identified in the Pew Research Center ranking in 2015, which in turn was based on ComScore data. Excluded were gossip (Elite Daily) and sports (bleacherreport.com) sites. Only specific websites were named, not 'entities' ('Yahoo! ABC'), but included were sites representing Pew-listed 'entities' that were listed highly on Alexa (Yahoo News and ABC News). A 2016 analysis was not available at the time of the 2016 Time Series study.

V162031 Numeric POST: Did R vote in the November 2016 elections

Questionnaire: POSTVOTE_RVOTE

IF R DID NOT INDICATE IN THE PRE THAT R ALREADY VOTED:
IF R IS REGISTERED TO VOTE:

In talking to people about elections, we often find that a lot of people were not able to vote because they weren't registered, they were sick, or they just didn't have time.

Which of the following statements best describes you:

- One, I did not vote (in the election this November),
- Two, I thought about voting this time, but didn't,
- Three, I usually vote, but didn't this time, or
- Four, I am sure I voted?

For Web administration, the response options did not appear in the question text and were replaced with: Which of the following statements best describes you?

V162033 Numeric POST: FTF ONLY: IWR CHECKPOINT: have correct Post ballot card

Questionnaire: POSTVOTE_CKBCARD

IF MODE IS FTF:
 IF R DID NOT REPORT IN THE PRE THAT R ALREADY VOTED:
 IF HAS NOT REFUSED TO INDICATE REGISTRATION STATUS:
 IF R IS REGISTERED IN COUNTY OF CURRENT ADDRESS OR IF R IS NOT REGISTERED:
 CONGRESSIONAL DISTRICT IS: [PRELOAD: sample state] [PRELOAD: sample district].
 ASSIGNED BALLOT COLOR IS: [YELLOW/GREEN].
 PLEASE DESCRIBE WHETHER YOU HAVE THE CORRECT BALLOT CARD FOR THE RESPONDENT:
 [-- NO BALLOT CARD -- /]

'Yellow' ballot card assignment indicated that names of Democratic candidates were included before names of Republican candidate names for vote section questions that list candidate names and, in face-to-face mode, for the order of names listed on the Ballot Cards.
 'Green' was assigned for display of Republican candidate names first.
 Ballot card use was not intended for face-to-face respondents when the respondent was not registered at the sample address or the county of sample address, or when names of candidates running for the U.S. House, U.S. Senate or Governor were not preloaded for candidates who were registered at the sample address or county of sample address.

V162037a Numeric POST: Preference for Pres cand (did not vote)

Questionnaire: POSTVOTE_PREFPRWHO

IF R DID NOT INDICATE IN THE PRE THAT R ALREADY VOTED:
 IF R IS NOT REGISTERED OR IF R IS REGISTERED TO VOTE AND DID NOT VOTE:
 IF R PREFERRED A PRESIDENTIAL CANDIDATE:

Who did you prefer? [Hillary Clinton, Donald Trump / Donald Trump,
 Hillary Clinton, Gary Johnson, Jill Stein , or someone else?

The order of major party Presidential candidate names was assigned according to the same value used for the order of Democratic and Republican U.S. House, U.S. Senate, and governor candidate names. This value also determined, for face-to-face respondents, the color of the Ballot Card, if used (yellow if Democratic candidate names first, green if Republican candidate names first).

V162055 Numeric POST: Does R prefer gubernatorial candidate

Questionnaire: POSTVOTE_GOVDPREF

IF R DID NOT INDICATE IN THE PRE THAT R ALREADY VOTED:
 IF R IS NOT REGISTERED TO VOTE OR IF R IS REGISTERED AND R DID NOT VOTE:
 IF A GUBERNATORIAL RACE WAS HELD IN REGISTRATION STATE:
 IF IWR HAS BALLOT CARD FOR REGISTRATION DISTRICT /
 IF IWR DOES NOT HAVE BALLOT CARD FOR REGISTRATION DISTRICT:

How about the election for Governor? Did you prefer one of the candidates for Governor?

[SHOW [YELLOW/GREEN] BALLOT CARD]
 DO NOT SHOW BALLOT CARD]

'Yellow' ballot card assignment indicated that names of Democratic candidates were included before names of Republican candidate names for vote section questions that list candidate names and, in face-to-face mode, for the order of names listed on the Ballot Cards. 'Green' was assigned for display of Republican candidate names first.

V162155a Numeric POST: How much U.S. support Palestinians in conflict w/Israel [PAL 1st]

Questionnaire: ISRSUPP_AMT1PAL

IF R IS SELECTED FOR PALESTINIAN SUPPORT QUESTION FIRST:

Please turn to page [PRELOAD: page] of the booklet.

In the conflict between Palestinians and Israelis, how much should the United States support the Palestinians? [A great deal, a lot, a moderate amount, a little, or not at all / Not at all, a little, a moderate amount, a lot, or a great deal?]

Respondents were randomly assigned to be asked about Israeli support or Palestinian support first.
For Web administration, reference to the respondent booklet was omitted.

RANDOMIZATION: Assignment to Israel-Palestinian support questions version 1A or 1B

Forward/reverse response option order

V162283 Numeric POST: CSES: 10pt scale: like-dislike Democratic Party

Questionnaire: CSES5_LDDEEMPTY

Please turn to page [PRELOAD: page] of the booklet.

I'd like to know what you think about each of our political parties. After I read the name of a political party, please rate it on a scale from 0 to 10, where 0 means you strongly dislike that party and 10 means that you strongly like that party. If I come to a party you haven't heard of or you feel you do not know enough about, just say so. The first party is: the Democratic Party

DO NOT PROBE DON'T KNOW

For Web administration, reference to the respondent booklet was omitted and the question read: We'd like to know what you think about each of our political parties. Using the scale below, please rate it on a scale from 0 to 10, where 0 means you strongly dislike that party and 10 means that you strongly like that party. If we come to a party you haven't heard of, you don't need to rate that person. Just click Next and we'll move on to the next one.

V162371a Numeric **POST: FTF CASI/WEB: WEB ONLY: Facebook login**

Questionnaire: FACEBOOK_LOGIN

IF MODE IS WEB:
IF R HAS A FACEBOOK ACCOUNT THAT R HAS USED IN THE PAST MONTH:

We are interested in the news people have read and shared on Facebook this year.

To save time and to get the most accurate information, with your permission we can learn this directly from Facebook. Facebook has agreed to help this way. Of course, we would keep this information confidential, just like everything else you tell us. After analyzing the results we will erase the information from our records.

Please log in to Facebook below. You'll be asked if you are willing to use Facebook to share some limited information with Stanford University and the University of Michigan for the American National Election Studies.

V162371b Numeric POST: FTF CASI/WEB: WEB ONLY: Facebook login reconsider

Questionnaire: FACEBOOK_LOGINPLEA

IF MODE IS WEB:
IF R HAS A FACEBOOK ACCOUNT THAT R HAS USED IN THE PAST MONTH:
IF R DID NOT LOG INTO FACEBOOK:

We understand it is your choice not to share information about how you've used Facebook.

Would you be willing to reconsider? To get an accurate picture of how all Americans use -- or do not use - Facebook, we need to include you.

Any information you do share through Facebook would be stored separately from the rest of your survey responses. We would use the information to look at things like how many news stories about the presidential election appeared in people's Facebook feeds, and how many posts with references to political candidates they liked, and other general descriptions of Facebook feeds and profiles. And we would keep the information confidential.

If you will log into Facebook, below, you can tell Facebook what information you are willing to give to Stanford University and the University of Michigan, or you can decide not to share anything.

V166001 Numeric RANDOM: Assignment to forward or reverse response options for selected questions

FTF n unweightd	WEB n unweighted	FULL n unweighted	V166001
605	1540	2145	1. Forward order (selected questions) or no response options
576	1550	2126	2. Reverse order (selected questions)

PRE-ELECTION WEIGHT Percentage distribution of responses:

FTF n weighted	WEB n weighted	FULL n weighted	V166001	FTF% weighted	WEB% weighted	FULL% weighted
612.2	1532.7	2143.2	1. Forward order (selected questions) or no response options	51.8	49.6	50.2
568.8	1557.3	2127.8	2. Reverse order (selected questions)	48.2	50.4	49.8

V166002 Numeric **RANDOM: Assignment to ballot color/ order of major party names in vote sections**

FTF n unweighted	WEB n unweighted	FULL n unweighted	V166002
611	1531	2142	1. Democratic cand names first (yellow ballot card) in vote sections
570	1559	2129	2. Republican cand names first (green ballot card) in vote sections

PRE-ELECTION WEIGHT *Percentage distribution of responses:*

FTF n weighted	WEB n weighted	FULL n weighted	V166002	FTF% weighted	WEB% weighted	FULL% weighted
608.8	1526.9	2134.1	1. Democratic cand names first (yellow ballot card) in vote sections	51.6	49.4	50.0
572.2	1563.1	2136.9	2. Republican cand names first (green ballot card) in vote sections	48.4	50.6	50.0
